Software Developer | Flutter, React, Node.js | Cross-border payments (US to India)

Experience

Software Developer | Jul 2026 – Present
Sliqpay (ARKS Ventures) – cross-border payments, US to India | Remote

- Built and shipped features on the production US–India remittance app (Flutter iOS/Android/Web): B2B company wallets, file-based bulk payouts with review and OTP, and USD/INR wallets (add money, withdraw to a US bank, send from balance).
- Built the embeddable Web SDK and partner onboarding (React admin, Firebase Cloud Functions with idempotent APIs, partner theming) so third parties can drop a white-labeled checkout into their own product.
- Replaced KYC with Persona on Android and iOS (inquiry APIs and analytics); made payouts safe to retry with idempotency keys, silent FX-quote refresh, and bank-link re-provision without restarting onboarding.
- Hardened the money path: TLS pinning, token-refresh race fixes, obfuscation, Crashlytics symbol upload, and secrets checks in the release workflow. Closed ~190 tickets; CORS and partner-header changes across 8 backend services.
- Built an analytics dashboard (funnels, volume, revenue, retention) on Node and Postgres materialized views. Faster start: splash prefetch, cached Remote Config, in-memory auth state.

SDE Intern | Jul 2025 – Jun 2026
Sliqpay (ARKS Ventures) – cross-border payments, US to India | Remote

- Set up CI/CD in the first weeks: GitHub Actions with strict analysis and Figma-matched golden tests, then TestFlight and Play Console.
- Built auth and onboarding (login, passcode, biometrics, Google sign-in, Terms consent) and KYC (documents, Plaid). Built the payment flows: bank transfer, UPI, Scan & Pay, FX comparison, fraud-check OTP, and idempotent order creation.
- Integrated Plaid, Sardine, CleverTap, and AppsFlyer. Built the responsive web version (~60 PRs). Wrote 110+ unit, widget, and golden tests.

Summer Intern | May 2024 – Jul 2024
Swecha – Telangana Tech | Hyderabad

- Designed and implemented an EHR patient-record module for clinical data using React, Node.js and PostgreSQL.
- Modeled and consolidated patient health data for medical history and analytics.
- Worked as a full-stack intern on the company's EHR portal, helping it load 30% faster and fixing existing issues.

Grub Coordinator, Andhra Samithi Association | Aug 2024 – Apr 2025
Menu planning, vendor coordination and budgets for campus events.

BOSM Coordinator, Audiforce BITS Pilani | Aug 2024 – Apr 2025
Crowd control, entrance and ticket scanning for key campus events.

Education

BITS Pilani | Pilani, India
Bachelor of Engineering, Computer Science and Engineering | 2022 – 2026

Relevant Coursework: Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Operating Systems, Computer Networks

Projects

Connect Express (React, Node.js, Express, MongoDB) | Nov 2026

- Built a railway search web app on the August 2026 Indian Railways timetable: 1,520 trains and 58 stations in Tamil Nadu, Karnataka, and Andhra Pradesh. Direct train or one change. Connecting search is JavaScript; a train that already left that day is dropped instead of treated as a wait.
- Typed from/to plus an optional earliest departure and mapped that to station codes. A saved trip is stored only if that train and those times are still on the timetable.

Event Management System (Database Management System) | Feb 2024 – Apr 2024

- Designed a MySQL database normalized to 3NF for users, admins and vendors, with a Java backend (MySQL connector, JDBC) and a Java Swing GUI.
- Implemented the admin view-events and feedback tracking flows and the vendor add-food-items flow.

Skills

Frameworks & Platforms: Flutter, GetX, React, Node.js, Firebase, iOS, Android, Flutter Web
Languages: Dart, TypeScript, JavaScript, Java, SQL
Integrations: Plaid, Persona, Sardine, CleverTap, AppsFlyer, Sentry
Tools: Git, GitHub Actions, CI/CD, REST APIs, PostgreSQL, MySQL, Crashlytics, unit/widget/golden tests
